# Advanced Google Hacking Techniques

**Web crawler**, sometimes called a **spider** or **spiderbot** and often shortened to **crawler** is an Internet bot that systematically browses the World Wide Web, typically for the purpose of **Web indexing**

Crawlers consume resources on visited systems and often visit sites without approval.

**robots.txt**, is a standard used by websites to communicate with web crawlers and other web robots. The standard specifies how to inform the web robot about which areas of the website should not be processed or scanned.

# GHDB (Google Hack Database)

The screenshot shows the Exploit Database website interface. The browser address bar displays `exploit-db.com/google-hacking-database`. The page header features the Exploit Database logo and a navigation menu. The main content area is titled "Google Hacking Database" and includes a search bar, a "Quick Search" input field, and a table of search results. The table columns are "Date Added", "Dork", "Category", and "Author".
